Course On

Advance Course – Managing Mega Project using Microsoft Project 2013

Date : 15th - 16th March 2017
Time : 9.00 am to 5.00 pm
Venue : Applied Technology Group Training Centre, Subang Jaya

COURSE OVERVIEW

Mastering the art of planning is a key to controlling project constraints.

This course provides the participants the practical skills and structured training approach to use Microsoft Project 2013 with its advance techniques and features in project scheduling & monitoring. Unique features of this course include using practical scenarios in project management and guidance by our experience instructor. At the end of the course, participants will be able to adopt management methodology based on industrial's best practices. You can leave the class knowing exactly what to do and how to use Microsoft Project in your daily project management work.

Both the exercises and examples used in the class are scenario based. We do not just teach you how the various Microsoft Project's Advance features work, but also illustrate to you in real life scenarios when to use the features in managing mega projects. It also explains how to create and manage multiple projects, set plan expectations with key stakeholders, kick off execution work, monitor and track project performance using the Earned Value Management practices and close out the project.

Microsoft Project provides the power and flexibility to plan and track projects and meet your business needs. The course is focusing on the more advance functions and features of the application; the participants will be expected to have some basic skill in Microsoft Project. Participants will then learn these new and more advance functions and features through practical exercises with one-to-one terminal hands on session.

KEY ELEMENTS OF THE COURSE

- Develop and master advance techniques in projects scheduling and monitoring
- Manage a mega project with interaction of various departments and scopes of works
- Manage and consolidate multiple inter-dependent projects with shared resources
- Include risk and uncertainty evaluation and management
- Hands on practice on more advance progress tracking, manpower scheduling, resources planning and utilization, cost tracking and critical path monitoring
- Maximize profit and minimize cost
- Simulation for more real life experience
- Real practical experience and examples across many different industries
- 2 days of intensive hands-on practice
